

Wellfloat Board

CEC The Drive

The CEC Wellfloat Boards works best for amplifiers, speakers, Reel-to-Reel and all High End Devices. We highly recommend them for our CD belt drives.

They use a patented pendulum movement floating suspension system. The system consist of an U-shaped special stainless steel spring connected via a piano wire. When weight is applied on top board, U-shaped stainless steel comes down to make piano wire free movement. Piano wire works for pendulum movement.

Thus the vibration up-down, right-left, forward-backward will be totally absorbed. This is super effective at minimizing floor vibrations and eliminating microphonics within components. Increased threedimensionality significantly better reproduction all areas as bass, midrange and tweeter.

Included with the platform are 4 floating suspension systems that are indispensable to maximizing the performance of the platform. You will be thrilled with improvements in resolution of music.

CEC WF-BIG - ASB4560WF

Dimensions: 450 x 600 x 58(h) mm,
Weight: 9 kg - Weight capacity: 5 - 90kg.

CEC WF-SMALL - ASB3545WF

Dimensions: 350 x 450 x 58(h)mmm,
Weight: 5,5 kg - Weight capacity: 5 - 90kg

"If, however, we had to choose just one...The CEC WellFloat board has become something of a 'go-to' choice, not only does it bring an entirely positive enhancement to CD replay, it's proved to be a remarkably versatile, well-balanced (no pun intended) device in a wider range of applications than we might have anticipated." (K. Scott - from Living Voice - UK)
